SALINI L

Associate Technology Architect – Backend, Cloud & Distributed Systems

Trivandrum, Kerala, India

salinil.sasidharan@gmail.com | +91 8086005711 | linkedin.com/in/salini-l-sasidharan

PROFESSIONAL SUMMARY

Associate Technology Architect with 12+ years of experience designing and delivering scalable, cloud-native backend systems using Node.js, TypeScript, and Express. Proven expertise in distributed systems on AWS spanning REST API design, microservices, event-driven patterns (SNS/SQS), CI/CD, and Infrastructure as Code with Terraform, Docker, and Kubernetes. Skilled in observability, secure coding, and HIPAA/GDPR-compliant delivery. Applies AI-assisted development, including custom agents built into backend codebases, to accelerate delivery while mentoring engineers across the full software development lifecycle.

TECHNICAL SKILLS

Programming Languages: Node.js, TypeScript, JavaScript, PHP

Application Development & Frameworks: Express.js, Laravel, REST APIs, Microservices Architecture, Event-Driven Architecture (EDA)

Databases & ORM: PostgreSQL, MySQL, MongoDB, Redis, Sequelize, Drizzle ORM

Cloud & DevOps: AWS (EC2, S3, Cognito, SNS, SQS, Lambda, RDS, SES, CloudWatch), Cloudflare, Docker, Kubernetes (EKS), Terraform, Checkov IaC scanning, CI/CD (GitHub Actions)

Messaging: AWS SNS, AWS SQS

Testing & Quality: Jest, Vitest, Supertest, Unit Testing, Integration Testing

Monitoring & Observability: Datadog (APM, logs, traces), Prometheus, Pino

Security & Compliance: AWS Cognito (JWT), OAuth2, reCAPTCHA Enterprise, App Attestation, Helmet, Rate Limiting, Secure Coding Practices, HIPAA, GDPR

Third-Party Integrations: Twilio, Google APIs, Firebase

Frontend Technologies: React, HTML, CSS, jQuery, Ajax

AI-Assisted Development: AI Coding Agents, Agentic Workflows, Prompt Engineering

Development Methodologies: Agile (Scrum, Kanban)

Version Control: Git, SVN

PROFESSIONAL EXPERIENCE

Experion Technologies (India) Pvt. Ltd., Trivandrum **May 2019 - Present**

Domains: Healthcare and Wellness — Chronic Care, Maternal and Child Health

Associate Technology Architect *Jun 2025 - Present*

Technology Lead *Jan 2022 - May 2025*

Lead Software Engineer *May 2021 - Dec 2021*

Software Engineer *May 2019 - Apr 2021*

- Own end-to-end backend and cloud infrastructure for a multi-product health-tech suite spanning chronic care, maternal and child health, and a unified platform across iOS, Android, and Web.

- Lead backend architecture, API design, database modeling, and AWS/Cloudflare infrastructure using Terraform-based Infrastructure as Code.
- Drove CI/CD adoption with GitHub Actions, enabling consistent monthly production releases, on-demand critical hotfixes, and weekly QA deployments while reducing deployment time by 60%.
- Established observability with Datadog and Prometheus — centralized logging, distributed tracing, and proactive alerting — reducing production defects by 40%.
- Strengthened security by initiating App Attestation across three applications to block bot attacks on public APIs, and enforcing Checkov IaC scanning in CI to stop Terraform misconfigurations reaching production.
- Mentor 10–12 engineers annually while managing a core backend team, collaborating across a ~22-member cross-functional team through sprint planning, code reviews, and releases.
- Led HIPAA and GDPR compliance initiatives across the product suite, driving data protection, audit readiness, and remediation to bring the platform to full compliance.
- Led AWS cost optimization through instance right-sizing, storage lifecycle policies, and elimination of idle resources, reducing monthly cloud spend across the suite.
- Designed and built custom AI agents within the backend codebase to automate repetitive development workflows, cutting manual effort and accelerating feature delivery across the team.

Senior Software Engineer — Naga Info Solutions Pvt. Ltd., Trivandrum **Jul 2016 - May 2019**

Domains: CRM, Social Networking, E-commerce

- Developed backend APIs and web applications across CRM, social networking, and e-commerce product lines, delivering production-grade features on tight timelines.
- Built RESTful APIs using Node.js, Express.js, PHP, and Laravel, integrated with AWS services (EC2, S3, RDS) over MySQL, PostgreSQL, and MongoDB.

Programmer — National Informatics Centre (NIC), Govt. of India **Aug 2014 - Jun 2016**

Domains: Public Sector and e-Governance, Education and Examinations

- Developed and maintained critical e-governance systems under NIC, Ministry of Communications and Information Technology, Government of India.
- Delivered a statewide board examination platform — among Asia's largest, supporting approximately 500,000 candidates annually — alongside a teacher-education examination system.
- Payrolled by NIC-empaneled partners Neelkanth Digital Infonet and Velocis Systems.

Software Engineer — Zyntegra Solutions Pvt. Ltd. **Dec 2013 - Aug 2014**

- Developed web applications using PHP and MySQL; contributed to UI, API, and database modules.

PROJECTS

Unified Health Platform (Healthcare — Architecture and Backend)

- Owned the architecture of a centralized health-tech platform consolidating shared services across multiple products, defining service boundaries and shared data models.
- Architected a dynamic role and permission model with constraint-based access control and country-level overrides, realized on AWS Cognito (JWT) with multi-role support.
- Defined platform-wide cross-cutting concerns — Redis-backed rate limiting and response caching, Datadog observability, and an automated testing baseline with Vitest.

Tech Stack: Node.js 24, TypeScript, Express 5, PostgreSQL, Drizzle ORM, Redis, AWS Cognito, Datadog, Vitest, React 19 (admin dashboard)

Maternal & Child Health Platform (Healthcare — Mobile and Web)

- Led backend and infrastructure development for a maternal and child health platform serving iOS, Android, and Web clients.
- Designed solutions for antenatal care, child growth tracking, vaccination schedules, and consultations.
- Owned infrastructure setup on AWS and Cloudflare, including Kubernetes (EKS) deployments and Terraform-based Infrastructure as Code.
- Integrated third-party services (Twilio, Datadog, Google APIs) and established automated testing with Jest across backend modules.

Tech Stack: Node.js 20, TypeScript, Express 5, PostgreSQL, Sequelize, Redis, AWS (Cognito, S3, SQS), Twilio, Docker, Kubernetes (EKS), Terraform, Datadog

Chronic Care Management Platform (Healthcare — Mobile and Web)

- Built backend functionality for chronic condition care covering patient health tracking, consultations, appointment booking, lab reports, and prescriptions.
- Led architecture, API design, and database modeling across iOS, Android, and Web clients.
- Designed and maintained AWS infrastructure (EC2, S3, Cognito, SNS, SQS) using Terraform with Checkov-based IaC security scanning.
- Built a custom observability stack integrating Prometheus metrics, Datadog APM, and Pino-based structured logging.
- Implemented third-party integrations including Twilio, Google APIs, and reCAPTCHA Enterprise; introduced App Attestation to prevent bot attacks.

Tech Stack: Node.js 24, TypeScript, Express 5, PostgreSQL, Sequelize, Redis, AWS (EC2, S3, Cognito, SNS, SQS), Twilio, Datadog, Prometheus, Docker, Terraform, Checkov

Integrated Examination Management System (Public Sector — Web)

- Developed and maintained one of Asia's largest board examination systems, handling approximately 500,000 candidates annually.
- Delivered candidate registration, marks collection, hall ticket issuance, centralized valuation, tabulation, result publication, and revaluation modules.
- Also delivered a teacher-education examination module covering registration, question paper estimation, examiner posting, tabulation, and certificate printing.

Tech Stack: PHP, jQuery, Ajax, PostgreSQL, Apache

EDUCATION

MCA — University of Kerala, 2013 · Sree Narayana Institute of Technology

B.Sc. Mathematics — University of Kerala, 2010 · BJM Govt. College, Chavara

ACHIEVEMENTS

- Rewards & Recognition (R&R) award for outstanding performance on the health-tech platform.
- Recognized by leadership for proactive ownership during security and compliance audits.
